

Neptune

Neptune is the most distant planet in the Solar System.

- **Planet type:** Ice giant
- **Distance from Sun:** 30.1 AU (4.5 billion km)
- **Diameter:** 49,244 km (4 × Earth)
- **Year length:** 164.8 Earth years
- **Day length:** 15.9 hours
- **Moons:** 16+ (largest: Triton)
- **Rings:** 5 faint rings
- **Atmosphere:** Hydrogen, helium, methane
- **Winds:** Up to 2,100 km/h
- **Discovered:** 1846
